

AIR CONDITIONING INTEGRATION • SMART CLIMATE CONTROL

One app for your air conditioning, built to grow.

Bring your existing air conditioning units under intelligent Loxone control. Built on the Miniserver Go and a wireless AC controller per indoor unit, the system replaces separate remotes with one app, on-site or remotely. Add a radiator or UFH zone controller to each room, giving true room-by-room temperature sensing and heating control — automatically preventing heating and cooling from fighting each other, so you only ever pay to run one. Best of all, the same Miniserver is ready to extend to lighting, blinds and access control for the rest of your home.

Miniserver Go

CENTRAL CONTROLLER

The brain of the system. Manages automation logic and connects securely to the Loxone App, on-site and remotely.

Wireless AC Controller

PER INDOOR UNIT

Wireless interface for your air conditioning's indoor unit, bringing mode, temperature and fan control into the Loxone App alongside the rest of your home.

Miniserver Go

INITIAL INVESTMENT, ONE-OFF

£462.53

Wireless AC Controller

PER INDOOR UNIT

£259.20

Radiator / UFH Zone Controller

PER ROOM WITH AN INDOOR UNIT

£119.11

Full Heating Control Upgrade

OPTIONAL • BOILER & HOT WATER

from £140.66

All prices shown include VAT. Installation and programming are additional and subject to a site survey.

Key Features

One App, Every Zone

Control every indoor unit from the Loxone App instead of juggling separate remotes, on-site or remotely.

No Heating vs Cooling Conflicts

Each radiator or UFH zone controller senses room temperature and controls heating directly, so a room is never heated and cooled at the same time.

Energy Saving & Cost Efficiency

Room-by-room scheduling and conflict-free heating and cooling cut wasted energy and reduce running costs.

Optional Full Heating Control

Upgrade to full heating control to extend Loxone to the boiler and hot water, alongside your AC and radiators.

Built to Grow Beyond Your AC

The same Miniserver at the heart of this system can become the hub for your whole home. Extend Loxone control to lighting, blinds, and access throughout the house, unifying everything into a single app and platform — at a fraction of the cost of starting a new system from scratch.
