

SMART HOME AUTOMATION • LOXONE SYSTEMS

One platform for every system in your **home.**

SimpliHome Automation designs and installs Loxone smart home systems, bringing energy management, climate control, lighting and more together on a single, intuitive platform. As a Loxone Silver Partner, every installation is backed by official Loxone training and hands-on experience. Visit www.simplihomeautomation.co.uk for full details of our services.

One app, every system

Energy, heating, lighting, blinds, security and access, all controlled from the same Loxone App.

Certified installation

As a Loxone Silver Partner, we design, program and commission every system to Loxone's own standards.

Built to expand

Start with one system and grow. The Miniserver at the core scales to the rest of the home over time.

Energy Management

MONITORING

Energy Meter

MID-certified single- or three-phase metering, wired directly into the system for accurate, real-time consumption data.

SMART FEATURE

Smart Energy Optimisation

Tracks consumption and generation across the property, supporting load management and informed energy decisions.

Real-time consumption data

See what every circuit is using, viewable live from the Loxone App.

Load management

Automatically balance demand across circuits to avoid unnecessary peaks.

Solar & storage aware

Integrates with compatible PV and battery systems to prioritise self-generated energy.

EPC & Part L support

Consumption data and occupancy-linked control can help support Part L / SAP documentation.

Future Homes Standard 2026

From 24 March 2027, new homes in England must produce 75% less carbon than those built to 2013 standards, under updates to Part L and Part F of the Building Regulations. Loxone's energy management systems are listed on the UK Government's Energy Technology List (ETL), supporting developers working towards Future Homes Standard compliance.

Climate Control

SMART FEATURE

Smart Heating Controller

Manages heating and cooling setpoints room by room, adapting to schedules, presence and open windows.

Room-by-room comfort

Every room is heated or cooled to its own schedule and setpoint.

Window & safety aware

Heating pauses automatically if a window is opened, then resumes once closed.

ZONE CONTROL

Radiator / UFH Zone Controller

Wired or wireless zone control for underfloor heating and radiators, fitted to standard valve threads.

Presence-linked heating

Setbacks apply automatically in unoccupied rooms, then recover before you're back.

Works with UFH or radiators

Suits underfloor heating, radiator valves, or a mix of both across the property.

Lighting

SMART FEATURE

Smart Lighting Control

Manages scenes and moods per room, with dimming, presence and daylight-linked control.

Scenes & moods

Set the mood for movie nights, dinners or mornings at the touch of a button.

Familiar switches retained

Traditional push-button switches continue to work exactly as before.

SWITCHES & SENSORS

Touch Switch & Motion Sensor

Wired or wireless touch switches and motion sensors, or familiar push-button switches.

Motion & daylight automation

Lighting responds automatically to occupancy and available daylight.

App & keypad control

Control from the Loxone App, or a Touch switch on the wall.

Also part of the platform

Blinds & Shutters

Automated control with wind and rain safety built in.

Security & Access

Alarm zones, door/window contacts and NFC or PIN entry.

Multi-Room Audio

Synchronised audio zones throughout the property.

One Miniserver. A platform that grows with you.

Start with the system that matters most to you, then extend the same Loxone Miniserver to cover the rest of the property over time — all unified in a single app. Expansion is subject to Loxone Air wireless range and cable connectivity between locations.

ONE SYSTEM

WHOLE HOME
