

EV CHARGING • LOXONE WALLBOX

Charge your car with **energy you already own.**

The Loxone Wallbox brings intelligent EV charging into your smart home, rather than bolting on a stand-alone charger. The entry-level system is built around a smart home controller and wireless Wallbox charger, controlled entirely from the Loxone App — start, stop and monitor charging from your phone, on-site or remotely. Because it shares the same platform as the rest of your home, the Wallbox can be taught to charge from your own solar and battery power before it ever draws from the grid.

CENTRAL CONTROLLER**Smart Home Controller**

The brain of the system. Manages charging logic and connects securely to the Loxone App, on-site and remotely.

1.38–7.4 kW • APP CONTROLLED**Wallbox EV Charger**

Wireless charging station with fully adjustable output. Built-in interface accepts up to three add-on devices for future upgrades.

£1,656

ENTRY-LEVEL SYSTEM • INC. VAT

Smart home controller and Wallbox charger, app control only.
Excludes installation and programming — please contact us for a full quotation.

Why choose Loxone over a stand-alone charger

**One System, Not Another App**

A stand-alone charger only talks to itself. Loxone brings charging into the same platform as your lighting, heating and security — one app, one login, one place to look.

**Solar-Aware Charging**

The system's smart energy management can read your PV and battery output alongside grid supply, and instruct the Wallbox to prefer locally produced energy — reducing what you draw from the grid.

**Energy Monitoring**

Add an Energy Meter to track charging consumption alongside the rest of the house, giving a true picture of where your energy goes.

**Touch Control Panel Upgrade**

Fit a wall-mounted touch control panel at the Wallbox to select charging modes — Full Power, Comfort or Eco — by hand, without needing to open the app.

Part of a Complete Smart Home

The same controller at the heart of your Wallbox can become the hub for your whole home, unifying lighting, heating, blinds, security, access and audio into a single app and platform — with EV charging as just one more device it looks after.
