

## HOME SECURITY • SOLAR-POWERED CCTV

# Outdoor CCTV with no cables to run.

Wire-free, solar-charged cameras that mount almost anywhere outside — no mains wiring, no cable runs chased through walls, and no monthly subscription for the app or smart alerts. Each camera stores footage locally on a memory card properly rated for continuous recording, viewable anytime from your phone. Installed, configured and supported by SimpliHome — not left on default settings.

## OUTDOOR CAMERA • 2K RESOLUTION

**Wire-Free Solar Camera**

Battery-powered, weatherproof camera that mounts almost anywhere outside with no cabling at all — quick-adjust magnetic bracket, no drilling into brickwork for wiring.

## SOLAR CHARGING PANEL

**Solar Charging Panel**

Small panel wired to the camera's battery, keeping it topped up automatically in a spot with regular sun exposure — checked at survey — so it never needs bringing indoors to recharge.

## 256GB MEMORY CARD • ~28 DAYS RECORDING\*

**High-Endurance Memory Card**

Properly rated for the continuous read/write demands of security recording — not a standard consumer card — storing footage locally on the camera itself.

\*Approximate figure for a single camera based on continuous recording; actual storage duration will vary with activity levels and motion-triggered recording settings.

## Key Features

**Full-Colour Night Vision**

Built-in spotlights and a low-light sensor keep footage in colour after dark, not just black-and-white infrared.

**Smart Person, Pet & Vehicle Alerts**

On-camera detection tells people, pets and vehicles apart, cutting down false alerts — no subscription required.

**Built-in Siren & Spotlight**

Sound and light can be triggered automatically to deter unwanted visitors, controlled from the app.

**Two-Way Talk**

Speak and listen through the camera from anywhere, using the companion app on your phone.

## SOLAR CCTV CAMERA

**£135**

EX VAT PER CAMERA • SUBJECT TO SURVEY & INSTALLATION COSTS

**Checked at Survey**

- \* Camera position must get regular sun exposure to keep the battery charged.
-  Camera position must have sufficient Wi-Fi coverage to connect reliably.

**One camera, or a whole-home system**

Add cameras one at a time to any wall, fence or outbuilding with regular sun exposure and a solid Wi-Fi signal — both checked during survey. Every camera connects straight to your Wi-Fi, so there's no separate recorder box to install.
