

HOME NETWORKING • WI-FI COVERAGE UPGRADE

Reliable Wi-Fi in every room of your home.

Most ISP-supplied routers are built to a price, not to fill your home with strong, reliable Wi-Fi. This package adds professional-grade wireless and network equipment to your existing setup — extending fast, secure coverage to every room, while your ISP router keeps handling your internet connection exactly as before. Installed, configured and secured by SimpliHome — not left on default settings.

**WIRELESS ACCESS POINT • UP TO 5.1GBPS
WI-FI****Wi-Fi Access Point**

Wall or ceiling mounted, professional-grade Wi-Fi transmitter that replaces weak router signal with strong, even coverage throughout the home.

8-PORT • POWER-OVER-ETHERNET**Managed Network Switch**

Distributes wired network connections around the home and powers the access point over a single cable — no extra plug sockets needed.

*5.1Gbps is the theoretical maximum combined Wi-Fi speed of the access point itself; actual real-world speeds depend on your internet subscription and on interference from neighbouring wireless networks.

Key Features

**Whole-Home Coverage**

Reaches rooms, floors and gardens your ISP router's signal can't, ending Wi-Fi dead spots for good.

**Professionally Secured**

Configured with a secure network setup from day one, rather than left on factory-default settings.

**Powered Over One Cable**

The access point draws power from the network switch, so no extra plug sockets or trailing cables are needed.

**Ready for More Devices**

Spare wired ports and PoE capacity are ready for cameras, extra access points, or other equipment later.

Beyond the ISP Router

Your ISP router still handles your internet connection — we don't touch that. This package upgrades everything after it: stronger Wi-Fi, resilient wired connections, and a network that's professionally installed, configured and ready to grow with cameras, smart home devices or further access points as needed.
